

Review of sprint 2

In sprint 2 , we achieved all goals ,which contains Continuous tracking , Collect customer's delivery information , Introduction Services , Search for garden-related products , VIP services , Loyalty encouragement policy and DIY buyers training , although we accomplished all sections of them , we meet a series of problems , and we would like to talk about it .

In Search for garden-related products , we found is difficult to to search for product's name , and we thought out a ideal to deal with it . We thought is necessary to prepare a booklet ,which is containing all products , and we classify them by initial , so that users can find what they need quickly .

On the other hand , we found is difficult to search for product's size , because the trees change with each passing day , maybe the client choose one ,and when he received the trees ,maybe can't satisfied his willing , so we set up website ,and we give each tree serial number , and users can search all details all them ,such as height and so on , and we change the data each month .

In a conclusion , we completed all goals in time , and solved all problems by group meeting , among the task ,we learn a lot and think things in the round .
